

## Sima Showing A/V Switcher, Universal USB Transfer Item

LAS VEGAS — Sima Products is showing an A/V switcher and a universal USB transfer device during CES in South Hall booth number 21535.

The Model VS-502 A/V switcher is a digital component selector that provides the necessary A/V inputs for adding components to TV and home theater systems.

The VS-502 also up-converts composite to s-video and s-video to component video, and features five A/V inputs including component video, s-video and digital audio to feed the TV, VCR or DVD for recording. The need to switch cables on your TV to change video input types has been eliminated, the company said.

By pushing the selection button on the front panel, the signal from your DVD, satellite

dish or VCR is automatically converted to the best possible picture using an advanced digital comb filter, Sima said.

HITCH is a file transfer device that will move music and photos from USB. Sima's USB to USB transfer device, Model USB-101, allows consumers to transfer files between any two USB-equipped, digital devices such as iPods, digital cameras, thumb drives or MP3 players.

Like a computer, the USB-101 transfers files at USB 2.0 rates of up to 480 Mbits per second. This device delivers full USB power to allow operation and charging anywhere, any time without external power adapters, Sima said.

Price and shipping information will be available at the show. **CES**
